has necessary  
considerations  
of

Security is often an afterthought to be incorporated into a system after the design is complete, rather than being an integral part of the design process

Attackers only need to find a single weakness, while the developer needs to find all weaknesses

Potential attacks on the security features must be considered

Strong security is sometimes considered an impediment to efficient and user-friendly operation of an information system or use of information

Security requires regular and constant monitoring

Users and system managers tend not to see the benefits of security investments until a failure occurs
